In mathematical analysis, Hölder's inequality, named after Otto Hölder, is a fundamental inequality between integrals and an indispensable tool for the study of L^p spaces.. Theorem (Hölder's inequality). Let (S, Σ, μ) be a measure space and let $p, q \in [1, \infty)$ with $1/p + 1/q = 1$. Then, for all measurable real- or complex-valued functions f and g on S , $\|fg\| \leq \|f\| \|g\|$.

Hölder's inequality - Wikipedia

Conflict theory: Education promotes social inequality through the use of tracking and standardized testing and the impact of its "hidden curriculum." Schools differ widely in their funding and learning conditions, and this type of inequality leads to learning disparities that reinforce social inequality. Symbolic interactionism

In probability theory, the Vysochanskii-Petunin inequality gives a lower bound for the probability that a random variable with finite variance lies within a certain number of standard deviations of the variable's mean. The sole restriction on the random variable is that the distribution be unimodal (and the random variable continuous). The theorem applies even to heavily skewed distributions ...
