Pulsation Systems Cow Time

The default pulsation ratio is oftentimes split between 60 percent open time and 40 percent close time. Ratios can also be split, giving different ratios to front quarters and rear quarters. However, it is always important to consult with the manufacturer, as recommendations for pulsation rates and ratios can vary based on the type of equipment and liner being used.

Does your pulsation system need a check-up? - Progressive ...

The preferred range for pulsation rate is about 55 - 65 cycles per minute and the most common pulsator ratios are 60:40 and 65:35. An example pulsation cycle (at a pulsation rate of 60 cpm) is shown in the diagram below. Milk starts to flow

Solid state control — no moving parts and consistent pulsation output. Provides long life and predictable cow milking, even on a 24-hour dairy. Wide range of pulsation ratios— optimize milk and rest phases for fast and gentle milking. Wide range of pulsation rates— optimize the rate of pulsations per minute.

Pulsation Systems - Dairy Lane Systems

The teats of cows milked with the CoPulsation Milking System are left dry and not washed with milk by the milking machine. The true massaging action of the CoPulsation™ Milking System enables the product to operate at a lower pulsing rate. This provides sufficient time for the milk within the short milk tube to be evacuated.
