Rammed Earth Manual
Rammed earth is the process of compacting dirt to form walls. It's slower going than framing a house with lumber but the thermal mass an earthen wall provides can help you get a comfortable quiet home the old-fashion way. For over the last 200,000 years humans have been creating different ways of building with earth.

The advantages of compressed or rammed earth blocks are many. Since the blocks are machine made they are uniform in size and, with some care, uniform in density. It is common practice to drystack (mortarless) 12" or thicker walls immediately upon ejection from the machine since the blocks are smooth and sharp cornered.
