Abstract. P. J. van Albada and K. B. Stolarsky ([1], [2]) noted in 1971 that many inequalities in GI, Chapter I, for the sides of a triangle can be rewritten in the form $p(a, b, c) \geq 0$ or $p(a, b, c) \leq 0$ where $p(a, b, c)$ is a symmetric and homogeneous polynomial of degree n in the real variables a, b, c representing the sides of a triangle.

Triangle Inequality. The Triangle Inequality says that the sum of the lengths of any two sides of a nondegenerate triangle is greater than the length of the third side. This inequality is particularly useful and shows up frequently on Intermediate level geometry problems. It also provides the basis for the definition of a metric space in analysis. ...
